

CARBON

- 
- Carbon is the foundation of life
  - CO<sub>2</sub>
  - Carbon cycle is the process of carbon being continuously recycled through the closed environment of earth
  - Carbon sinks are where carbon is stored

# INDIVIDUAL IMPACT ON CARBON EMISSIONS

Transportation: 29%

Electricity: 25%

Commercial & Residential 13%

Agriculture 10%

Industry 23%

# CLIMATE CHANGE

The ocean is one of the largest carbon sinks and that is because of ocean acidification and that's caused by climate change which makes the ocean a place where living things cannot survive anymore.

- EATING LESS MEAT
- CARPOOL, PUBLIC TRANSPORTATION
- BUY LESS CLOTHES
- DON'T WASTE ELECTRICITY
- USE LESS PLASTIC & RECYCLE

WHAT CAN WE DO ABOUT IT???

# SELF-REFLECTION

**This presentation was eye opening. There were a lot of information grasped from it, I didn't know anything regarding that situation before it was introduced, it made me feel bad because of how unknowledgeable i was about our own planet.**

**But now that I know I am working towards change. I am a person that buys a lot of clothes but from now on I am going to start to limit that and also I'll eat less meat and dairy as possible.**
